

ABSTRACT

[0065] A method of controlling events executed on a first device connected to a mobile communications network using a second device connected to the first device over a wired communications network is provided. The method comprises
5 executing a first event by interacting with the second device; communicating data associated with the first event to the first device over the wired communications network; and executing a second event on the first device, wherein the second event corresponds to the first event executed on the second device.
